Why Karelian Shungite?

Shungite is a rare carbon-rich mineraloid found almost exclusively in the Shunga region of Karelia, Russia. What makes it extraordinary is its unique molecular structure: natural Fullerene C60 — hollow carbon cages that earned their discoverers the 1996 Nobel Prize in Chemistry.

EMF ABSORPTION

Laboratory tests demonstrate that shungite significantly attenuates electromagnetic fields across a broad frequency spectrum, including 5G, Wi-Fi (2.4 & 5 GHz), and Bluetooth bands.

FULLERENE C60

A naturally occurring carbon allotrope with powerful antioxidant properties. Fullerene molecules in shungite form a crystalline lattice that interacts with electromagnetic waves.

WATER PURIFICATION

Shungite has been used for centuries in Russian traditional medicine for water purification. Its carbon structure adsorbs organic compounds, heavy metals, and bacteria.

2 BILLION YEARS OLD

Formed during the Paleoproterozoic era, Karelian shungite predates all complex life on Earth. Each piece carries the concentrated energy of deep geological time.

QUALITY ASSURANCE

Every AdiShila product includes a unique QR code for instant authenticity verification. Our shungite is independently tested by certified Indian laboratories (SGS / TUV standard) to confirm mineral composition and Fullerene C60 content.
